

Curtain wall elevation takeoff

EX-01 / EX-GS revision A. Constructed example, not completed client work.

Annotated opening reference

Shown geometry is diagrammatic, not to scale. Profile widths are unspecified.

Gross opening dimensions only. Confirm glass and system deductions.

Quantity register - same basis as the Excel workbook

Mark	Gross size (ft)	Shown lites	Gross sq ft	Ref. framing ft
CW-N	30 x 20	6	600	180
CW-S	30 x 20	6	600	180

Gross area = width x height. Framing = perimeter + internal reference paths; perimeter is already included. These values are not fabrication cut lengths or glass order sizes.

RFI / scope question

Anchor spacing, structural embeds and barrier ownership need project details. Owner: authorised project contact. Status: open. No supplier price or generic waste factor is assumed.

Workbook output separates glass, framing, openings/hardware and assumptions. Imperial and metric columns describe the same geometry. Technical performance and compliance remain project-specific.
